

Your AI startup moves faster with an engineering leader in the room.

Hands-on CTO-level leadership for AI-native seed and Series A companies. No \$400K comp package.

WHO I WORK WITH

AI-native founders at seed and Series A with 5-30 person engineering teams and no dedicated CTO. Moving fast, but technical debt, team structure, or Gen AI readiness is starting to slow you down.

HOW WE WORK TOGETHER

Diagnostic Sprint

2 weeks | \$5,000 - \$8,000 flat

Fixed-scope engineering audit. Team structure, codebase, Gen AI readiness, and security posture reviewed hands-on. You leave with a written report and a prioritized action plan.

Fractional Retainer

1-2 days/week | \$10K - \$18K/mo

3-month minimum. Embedded eng leader who ships alongside your team, develops your engineers, tightens costs, and owns the hard calls on Gen AI adoption and cybersecurity.

Most clients start with the Diagnostic Sprint -- a low-risk way to work together before committing to a retainer or a full-time hire.
